### **PASS Alpha-System**

## **PASS – Alpha-System for Amada and FINN-Power (Thick-Turret Systems)**

This system for tool stations A, B, C, D and E represents all of the advantages a tool can offer.

The advantages of this tool are very clear. An easy, infinite punch length adjustment can be achieved by just turning the head to the desired punch length. This also allows a regrind length of up to 9.5mm.

Interchangeable stripper plates allow the same guide and head assembly to be used for a variety of shapes (just change the punch insert and stripper) significantly reducing overall tool costs!!

Time and money can also be saved with the easy snap on/off guide assemblies. Punch bodies are also interchangeable with original standard AMADA-style tools.
