

ps:®MT5 AND ps:®MT10

EFFICIENT SAVING OF SETUP AND TOOL CHANGE TIMES

There are several ways to save time and money. One of the fastest and most effective options is definitely to use a multitool for the TRUMPF tool system, the **ps:®MT5** or the **ps:®MT10**.

These two tools allow you to work with 5 or 10 different punching contours and/or embossing inserts in ONE tool.

With a **ps:®MT5** a max. diameter of 16 mm can be realised, with a **ps:®MT10** a max. diameter of 10.5 mm can be achieved. Special mention should be made of the **ps:®easy-type**, which allows font sizes up to 10 mm.

Of course, special shapes up to the maximum outer circle in the inserts are not a problem. For example, numbers or letters can also be embossed as a V-line.

By editing sheet metal with a variety of small punching operations and large lot sizes the advantages of time savings in setup and tool change times become immediately apparent on the machine.
