PASS OVERVIEW

TRUMPF

THICK TURRET

SALVAGNINI

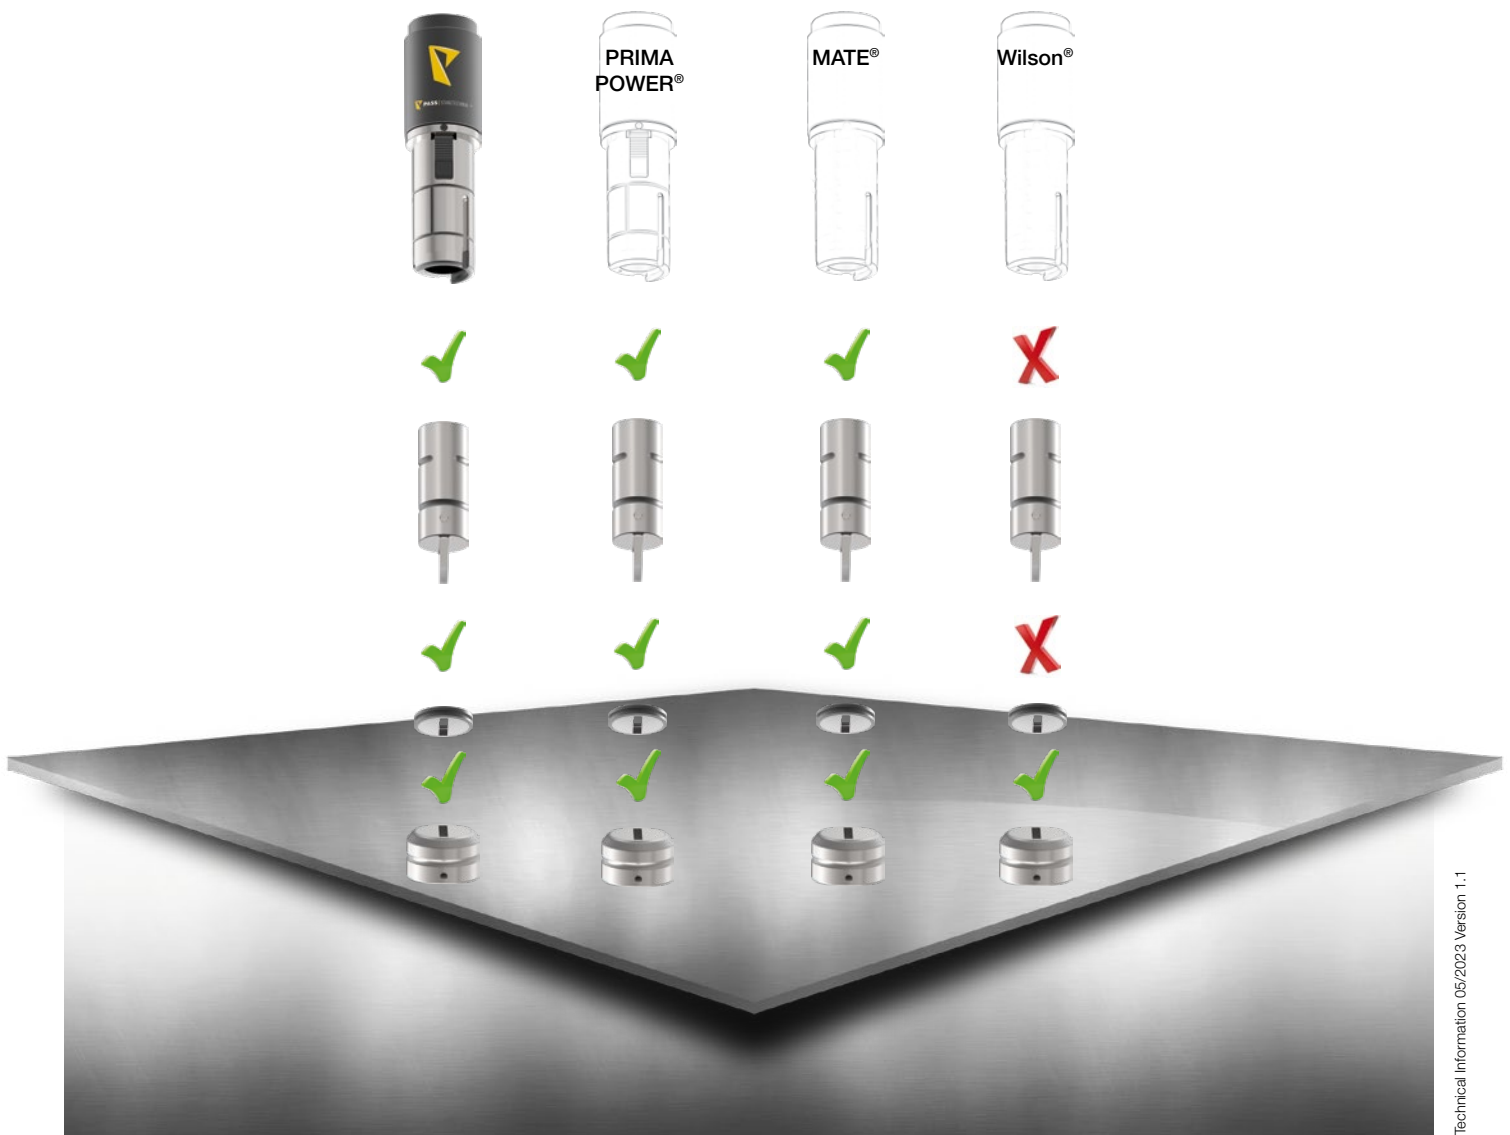

Punching tools for the THICK TURRET range are infinitely flexible. Embossings, punchings or special challenges in sheet metal can be accomplished by means of various functions as well as contours.

Different manufacturers offer different constructions for standard tools. But what fits together?

The users of these punching tools are often faced with the challenge of having or wanting to combine these different tool designs for cost saving. But not everything can be combined in a way so that the existing tools can be used.

PASS made it fit and created an overview of systems that can be combined with PASS tools. Our third party catalog provides information about the possibilities of combining PASS standard tools with other manufacturers.

Our technical sales team will be happy to advise you on the advantages of PASS tools!
